Simple, Complete Food Service System ™

MicroSale

Full Service

Customer Satisfaction is the most important objective in the restaurant industry. MicroSale helps your staff spend more time with your guests rather than on the computer. The simplicity of the software makes it easy to learn and fast to use.

MicroSale's fast and easy-to-manage POS software is designed to help you increase profit margins and focus your attention on customer service.

Feature Highlights

Reservations and Wait List

The Reservations and Wait List Module are standard MicroSale features. Take reservations for any time or day in the future from any workstation. This feature has the ability to send confirmation emails, auto-queue reservations onto the Wait List, and send text message alerts to a waiting guest's cell phone eliminating the need for a third-party paging system.

PDA/ Hand-held Wireless Terminals

MicroSale has the capability to run on a PDA or hand-held PC. This gives your servers the freedom to take drink orders from customers while they wait for a table, ring up orders outside on the patio, and even take credit card payments from guests right at their table. This translates into faster service and increased sales opportunities.
